

## CURRENT STATUS

December 2019

The Bureau of Land Management (BLM) is in the process of responding and finalizing the Environmental Impact Statement (FEIS) and ANILCA Section 810 Subsistence Evaluation of the proposed Ambler Road. At the same time, the National Park Service (NPS) is in the process of responding to the Environmental Economic Analysis (EEA) prepared in response to the right-of-way application for the project.

To review the DEIS and Draft ANILCA Section 810 Subsistence Evaluation visit:

To review the Draft EEA prepared in response to the right-of-way application to the NPS visit: <https://www.nps.gov/gaar/learn/management/ambler-row.htm> or <https://parkplanning.nps.gov/Ambler>

## PROJECT DESCRIPTION

The Ambler Access project concerns the preparation of the scoping portion of an SF-299 ANILCA right-of-way application for an approximately 200-mile industrial access road from the Dalton Highway to the Ambler Mining District in northwest Alaska. The Ambler Mining District has extensive mineral resources, including copper, silver, gold, lead and zinc. It has been characterized as one of the largest undeveloped copper-zinc mineral belts in the world. The area has been explored for decades, but development of the mineral resources has been limited due to a lack of transportation infrastructure for mine construction and operation.

The Ambler Access project could provide surface access to the Ambler Mining District and enable further exploration and development of the area's resources, providing for economic development. AIDEA undertook the project with the goal of forming a Public-Private Partnership (P3) to finance, construct, operate and maintain the facility. The project design is modeled on AIDEA's successful DeLong Mountain Transportation System (DMTS), which includes an industrial access road from the Red Dog Mine to the DMTS port. AIDEA worked with private industry to develop the DMTS industrial access road and the costs of road construction were paid back through tolls on road use.

Ambler Access could provide access to the Ambler Mining District through Gates of the Arctic National Preserve making use of special provisions in the Alaska National Interest Lands Conservation Act (ANILCA), that allow this type of access to reach the Ambler Mining District.

16 U.S.C. 410hh(4)

## APPROVAL PROCESS

ANILCA Section 201 directs the Secretaries of the Interior (represented by the National Park Service) and Transportation (represented by Federal Highways Administration) to conduct an Environmental and Economic Analysis to determine the best route through Gates of the Arctic National Preserve. Title XI of ANILCA also requires an Environmental Impact Analysis under the National Environmental Policy Act. According to the National Park Service, this "Environmental and Economic Analysis" would not be a NEPA document. The Bureau of Land Management, the Army Corps of Engineers, and the Coast Guard are participating in the Title XI process as they have regulatory authority over land, wetlands and water crossings on the proposed project.

In addition to the federal approvals, the project would require a land use permit from the Northwest Arctic Borough. Finally, AIDEA's regulations require there to be resolutions of support for the project from the Northwest Arctic Borough and a Regional Resource Advisory Committee appointed by the Governor to represent communities in the unincorporated areas in which the project is located.

## BUDGET/FINANCE

AIDEA, as a development finance authority, would develop the access route as a Public-Private Partnership

in which AIDEA funds and bonds would be used in conjunction with private capital for the construction and operation of the access modality. As with the DeLong Mountain Transportation System, mines using the road to haul ore to market would pay a user fee that would pay back the financing used for the road's development and construction.

## PROJECT/ ECONOMIC BENEFITS

Development of Ambler Access could allow private industry to develop a 75-mile long area of high mineral resources. Over the life of the project, multiple mines would likely be developed in the area. Benefits from the project include:

- Job and business opportunities for rural residents in north-central and northwest Alaska

### Road Construction and Operations

- An annual average of 365 jobs over road construction period
- Up to 81 full-time jobs for road operations and maintenance over the life of the road

### Mines Construction

- 2,777 direct annual jobs for mine construction with \$286 million in wages
- 2,034 additional annual indirect and induced jobs with \$108 million in wages

### Mining Operations

- 495 direct jobs with \$72 million in wages annually
- 3,436 additional indirect and induced jobs with \$228 million in wages annually

### Government Revenues Life of All 4 Mines

- \$393 million in mining license tax revenues to the State
- \$524 million in corporate income taxes to the State
- \$214 million in production royalties to the State
- \$13 million in claim rents to the State
- \$193 million in payments to local governments

## PARTNERS

*Owner/Operator:* Public-Private Partnership

*Partners:* AIDEA, Trilogy Metals, other mining companies, and other private entities

*For more information visit the project website:*
